

# Rough-stemmed sargassum

*Sargassum polycystum* C.Agardh, 1824

## KEY FEATURES

- Golden brown to mustard brown seaweed, thalli up to 40 cm in height, whole plant up to 2 m in length
- Holdfast discoid or conical shaped, rough stems with “y” shaped protuberances
- Leaves linear-lanceolate with irregular finely toothed margins, percurrent (base to apex) midrib, vesicles spherical or ovoid (smooth or terminating in a sharp point).
- Plants dioecious; male, and female plants are separate
- Common on mid-intertidal to shallow subtidal rocks and pools with coral-fragment bottoms
- Optimal growth achieved at 25°C
- Under preferred conditions can grow up to 1.3 mm per day

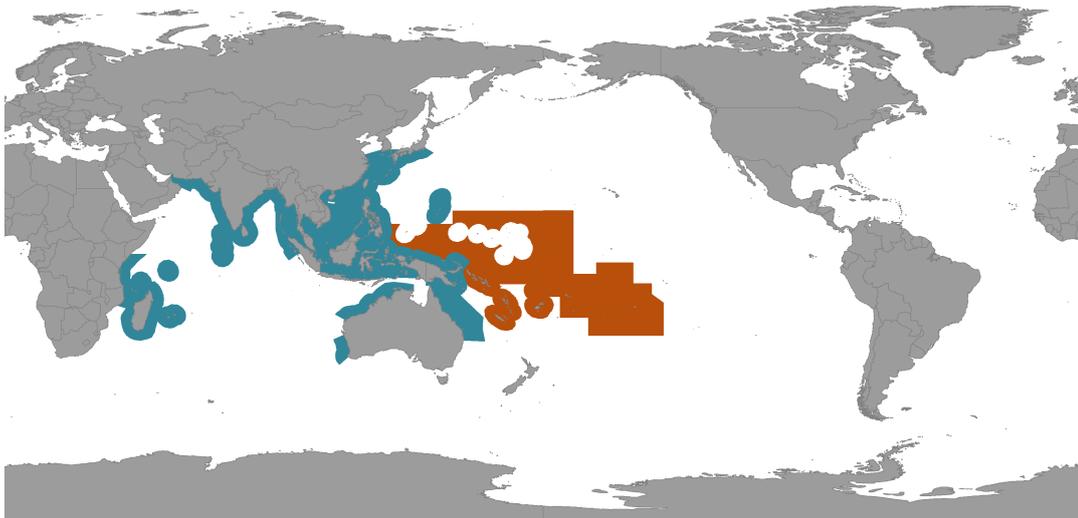

## PATHWAY

✓ ballast water

✓ biofouling

✓ aquaculture transfer

■ Native  
■ Cryptogenic  
■ Non-indigenous

# Rough-stemmed sargassum

*Sargassum polycystum* C.Agardh, 1824

## IMPACTS

Environmental impacts

Significant habitat forming species in the shallow sub-tidal. Blooms can occur in areas with high nutrient concentrations, especially nitrates

Human health impacts

Species of *Sargassum* have been reported to cause allergic contact dermatitis and potential irritants have also been reported from children swimming in infested algal lagoons

Social & cultural impacts

Seasonal die offs of this high biomass species can cause decomposition and putrid smell of drift algae in coastal areas. High biomass restricts the use of local fishing techniques

Economic impacts

Considered a pest and fouling species which can interfere with recreational and commercial use of waterways, forming large floating masses. Known to wrap around boat propellers. Decomposition from die-off can cause mass mortality of coral, affecting tourism and commercial fishing operations

## ADDITIONAL DETAILS

- Could be confused with other *Sargassum* species
- Can be used as fertiliser, human food, agricultural feed, and medicine
- Extracts have been reported to show potential as an insulin sensitiser in the management of type 2 diabetes

## DISTRIBUTION

### Native range

Canary Islands, Kenya to Madagascar, including Seychelles and Mauritius. India to Indonesia. China, Australia, Guam, Palau, Northern Mariana Islands, Federated States of Micronesia, Solomon Islands

### Non-indigenous range

Fiji, New Caledonia, Tonga, Samoa, Tuvalu, Vanuatu

## PRESENT IN TUVALU
